NUTRITION THAT STACKS UP

MAXIMISE HEALTH & PERFORMANCE

WHY FEED COPRICE?

We passionately believe goodness on the inside shows on the outside and most importantly delivers the best results. Every ingredient in CopRice feed is selected for its nutritional value and is developed to meet the dietary needs of animals across their life stages. No fillers only 100% goodness ensures your horses and ponies thrive on CopRice.

EQUINE NUTRITION

Our equine nutrition specialists have developed high quality feeds to nourish young foals, yearlings, breeding, leisure, sport, and senior horses. Blending Australian cereal grains and rice bran with age and lifestyle tailored additives, delivers optimum nourishment for health and fitness to achieve conditioning and performance targets.

EXTRUDED EQUINE NUTRITION

High quality ingredients combined with extrusion technology delivers superior digestibility and improved availability of nutrients in every mouthful. Containing no other cereal grains but Australian rice and/or stabilised rice bran, our extruded feeds are gluten free and high fat, satisfying the nutrient requirements of your horse without any fizzy behaviour.

NUTRITION THAT STACKS UP

STUART TINNEY OAM
Gold and Bronze Olympic Medallist
www.tinneyeventing.com

For the past 20 years I have fed CopRice. My horses perform and ride particularly well on CopRice Versatile and Performer, CopRice M Horse is also a fabulous great value all-round top up feed. The quality of CopRice speaks for itself, CopRice feeds provide the best nutrition for my horses, enabling them to perform at the highest level and most importantly deliver results.

AUSTRALIAN MADE. FARMER OWNED.

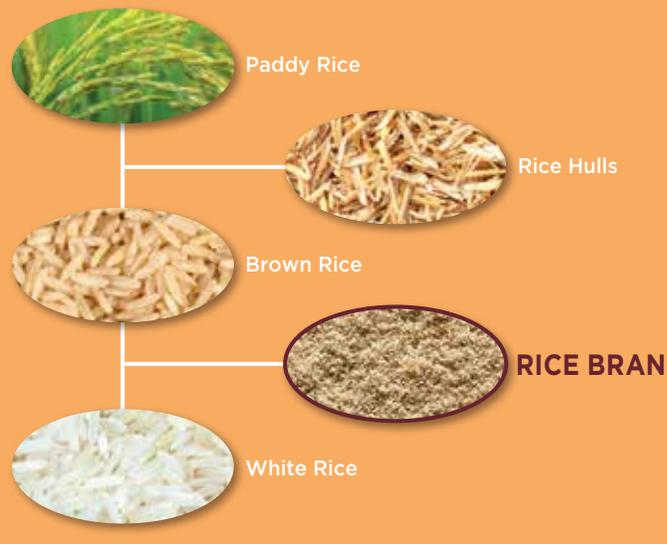

THE POWER OF RICE & RICE BRAN

COPRICE STRATEGICALLY USES RICE AND RICE BRAN IN ITS FEEDS TO PRODUCE BALANCED, CONSISTENT AND HIGHLY DIGESTIBLE RATIONS FOR HORSES AND PONIES. THESE SCIENTIFICALLY FORMULATED PELLETS PROVIDE OPTIMUM NOURISHMENT FOR HEALTH AND FITNESS TO ACHIEVE CONDITIONING AND PERFORMANCE TARGETS.

ORIGIN OF RICE BRAN

Rice bran is the outer layer of the of the rice grain, removed by polishing brown rice to become white rice. It is a highly nutritious product that is a rich source of energy, protein, vitamins, minerals, fatty acids and fibre, therefore a valuable ingredient to add to feed to boost the nutritional content.

RICE MILLING PROCESS

DIGESTIVE BENEFITS OF RICE

Rice is a unique cereal grain with the following characteristics:

- It contains starch that is readily digested in the foregut.
- It is a good source of energy, required by hard working muscles.
- It is used to rebuild liver and muscle glycogen stores, essential reserves for when fast work is required.
- It is a great source of B-group vitamins, which are vital for efficient metabolism (converting food into energy).
- It does not contain gluten or fructan, therefore reduces the risk of digestive upsets.

Feeding trials conducted at the University of Queensland have demonstrated that rice is primarily digested in the small intestine. This is extremely important for the digestive health and wellbeing of horses and ponies. Feeding less digestible grains such as corn, barley and oats can result in undigested starch flowing from the small intestine to the large intestine. This undigested starch can then ferment, causing an unbalanced hindgut and may cause fizzy behaviour, as well as contribute to problems such as laminitis and colic.

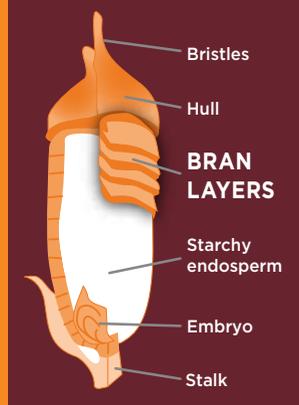

NUTRITIONAL BENEFITS OF RICE BRAN

The health and performance benefits of rice bran in equine feed are well documented, having been researched in Australian and international studies. Rice bran contains:

- A highly digestible form of concentrated energy.
- A rich source of monounsaturated fatty acids for heart and blood vessel health.
- A good source of natural vitamin E, which is a powerful antioxidant that helps protect tissues against oxidative damage and also supports immune function.
- A range of trace elements important for bone, cartilage and joint health, and for improving immune function and metabolism.
- A source of the essential amino acids including methionine for hoof integrity, and lysine for building muscle protein.
- A high rice bran oil content (up to 20%), which provides a dense source of energy. Using oil as an energy source conserves glycogen reserves in muscles, helping to delay fatigue and improve stamina.
- Gamma oryzanol is a natural anabolic plant compound, which promotes muscle development and definition.

The rice bran oil contained in rice bran may enhance the digestion of starch in the small intestine, for rice bran oil slows the rate of digestion through a horse's stomach and intestinal passage. This allows for more time for complete digestion of starch and helps reduce the risk of acidosis, colic and laminitis, which are associated with the fermentation of starch in the horse's hindgut.

COMPOSITION OF A GRAIN OF RICE

TYPICAL RICE BRAN NUTRIENT LEVELS PER kg FEED

TYPICAL ANALYSIS (ON AN AS FED BASIS)

Digestible Energy	Min. 14.5MJ

NUTRITION THAT STACKS UP

THE NUTRITIONAL BENEFITS OF RICE BRAN

	FEATURE	BENEFITS
ENERGY 	Rice bran has a high oil content and is a dense source of energy.	Rice bran contains up to 20% oil, which provides a dense source of energy. It is readily consumed and easily digested by horses, making it an effective and efficient way to add energy to the diet.
	Rice bran oil has a 'glycogen sparing' effect on energy availability.	Horses in moderate to heavy work require a blend of energy sources to maintain stamina and optimise performance. Using rice bran oil as an energy source helps conserve muscle glycogen reserves, providing a valuable energy source for use during intensive exercise. This additional source of energy assists in delaying muscle fatigue, lowering heart rate and reducing lactic acid accumulation during exercise.
PROTEIN 	Rice bran contains essential amino acids.	Rice bran, compared to cereal grains, is a good source of the essential amino acids lysine and methionine. Lysine is vital for growth and tissue repair, whilst methionine is a key component of strong, healthy hooves.
FATTY ACIDS 	Rice bran is a rich source of essential fatty acids.	Rice bran oil contains omega 3, 6 and 9 fatty acids. It is particularly high in monounsaturated fatty acids which belong to the omega 9 group of essential fatty acids. Essential fatty acids cannot be produced by horses and need to be obtained from the diet. Omega 9 fatty acids are important for heart and blood vessel health.
VITAMINS 	Rice bran is an excellent source of B-group vitamins.	The B-group vitamins niacin (B3) and pantothenic acid (B5) are necessary for the metabolism of carbohydrate, fat and protein into energy. Horses can produce B-group vitamins in their hindgut, however requirements increase with workload and additional higher levels available in feed will suitably benefit horses during exercise or training. Biotin (B7) is needed to produce keratin, the durable protein from which hooves and hair are formed. When combined with the amino acid methionine, biotin is particularly beneficial for hoof growth.
MINERALS 	Rice bran is a source of the trace minerals selenium, zinc, manganese and copper.	Rice bran is a source of selenium which protects cells from free radical damage. Selenium, with the support of zinc and copper, ensures a healthy metabolism and strong immune function. Rice bran is naturally high in zinc, copper and manganese which also function to ensure healthy bones, joints and cartilage and have many other beneficial roles in the body.
ANTIOXIDANTS 	Rice bran oil is a great source of tocopherols (including vitamin E) antioxidants.	Rice bran is a source of tocopherols and tocotrienols, both highly effective antioxidants that are forms of vitamin E. Antioxidants help protect cells against damage from free radicals which interfere with cellular function. Horses in moderate to high exercise intensity may benefit from additional antioxidants as reserves are quickly depleted. Vitamin E works best in combination with selenium to preserve cell membrane integrity and support immune function.
	Rice bran is naturally rich in gamma oryzanol.	Gamma oryzanol is a naturally occurring anabolic compound, which increases protein levels within cells resulting in improved skeletal muscle development. It works on the body's endocrine system (a collection of glands that secrete hormones directly into the circulatory system), to increase fat metabolism and improve protein synthesis. Gamma oryzanol helps maintain appetite in horses undergoing intensive exercise, reduces post-exercise soreness, and has been shown to help reduce the risk of gastric ulcers.

AUSTRALIAN MADE. FARMER OWNED.

THE COMPOSITION AND FUNCTION OF THE GASTROINTESTINAL TRACT

A HORSE IS CLASSIFIED AS A MONOGASTRIC HERBIVORE AND HAS FOUR MAJOR SECTIONS OF THE GASTROINTESTINAL TRACT. THESE ARE THE MOUTH, GASTRIC STOMACH, SMALL INTESTINE AND A HIGHLY DEVELOPED LARGE INTESTINE. THE LATTER CONSISTS OF THE CAECUM, LARGE COLON, SMALL COLON AND RECTUM, WHICH ARE COLLECTIVELY KNOWN AS THE HINDGUT.

1. THE MOUTH

Food is chewed using a grinding action which reduces particle size and produces saliva. Saliva contains bicarbonate which is a natural buffer for stomach acid, saliva also contains starch digesting enzymes. Chewing is an important process for digestive health, for well chewed food is more easily digested further down the gastrointestinal tract versus unchewed food that will not be digested in the small intestine. Unchewed food will be digested in the hindgut which can result in excitability 'fizziness', digestive upsets and possibly laminitis

2. THE STOMACH

The horse's stomach is a 'J' shaped organ with a capacity of 5-15 litres, representing approx. 10% of the total volume of the digestive tract. It has two primary functions, the first being the digestion of protein, and the second to mix, store and regulate the passage of feed from into the small intestine.

Feeds containing a high percentage of fat, including those based on rice bran, are released slowly from the stomach into the small intestine which ensures the small intestine has adequate time to digest fat the present in the diet. This slow release extends the time feed spends in the small intestine, which allows for the improved digestion of starch and protein before the diet is passed into the large intestine

3. THE SMALL INTESTINE

The small intestine has a capacity of 25-30 litres, and produces enzymes that can digest protein, fat, starch and sugar - breaking them down into small nutritional components for absorption into the bloodstream through the wall of the small intestine.

Whilst fats and proteins are for the most part digested in the small intestine, this is not always the case for starches and sugar. Feed containing large amounts of starch and sugar, including pasture or hay containing the sugar fructan, will end up in the large intestine where bacteria rapidly ferment it. This fermentation causes an accumulation of lactic acid and lowers the pH of the hindgut making it more acidic. This acid accumulation may result in reduced fibre fermentation, excitable or irritable behaviour and laminitis. Small feeds with lower starch levels will improve starch digestion in the small intestine and result in a healthier digestive system and healthier horse.

4. THE HINDGUT

The hindgut comprises the caecum, large colon, small colon and rectum, and has a capacity of approx. 90-110 litres. As horses are not capable of producing enzymes necessary to digest and release the energy held in fibre, they have an enlarged hindgut where millions of bacteria live and have the enzymes essential for fibre digestion. Horses rely on these bacteria in the hindgut to digest dietary fibre in a process known as fermentation. During fermentation fibrous material is broken down and converted into substances called volatile fatty acids (VFA's). The horse absorbs these VFA's from the hindgut into the body, where they are used as a source of energy. Thus, by using the hindgut and its resident bacteria, the horse is able to extract the energy from the valuable fibre component of feed, in a safe and efficient way.

I am proud to have been associated with CopRice for over 10 years, a brand known for product quality and integrity. What you feed your horses has such a great influence on their training and temperament, this is why I partner with a company which has feeds high in rice and rice bran, to ensure my horses get the best nutrition to maximise their performance.

AUSTRALIAN MADE. FARMER OWNED.

OPTIMUM HEALTH PELLETS

NUTRITION & DEVELOPMENT

A nutritionally complete high protein and nutrient rich feed. Formulated to provide balanced nutrition for optimum growth of foals and yearlings, and for aiding the health and fertility of broodmares and stallions. Its essential amino acid profile and unique blend of vitamins and minerals, supports lean muscles, strong tendons and healthy bones and teeth.

INGREDIENTS SELECTED FROM:

Wholegrain rice and rice bran, bran, barley, soybean meal, calcium carbonate, magnesium oxide, mono-calcium phosphate, salt, zeolite, canola oil, vitamin and mineral premix (including natural vitamin E, organic selenium and organic zinc), yeast culture, mycotoxin binder.

May contain traces of oats and maize, for this feed is made in the same mill as feeds containing these ingredients.

NUTRIENT LEVELS PER kg FEED

TYPICAL ANALYSIS (ON AN AS FED BASIS)

NOTE: If using supplementary selenium do not use at the same time as any other selenised fertiliser, prill or product, and do not exceed the stated dose and frequency without consulting a veterinarian.

NUTRITION THAT STACKS UP

NUTRITION THAT STACKS UP

Nutritional shares of pellets are approximates only

PROTEIN

Rice and rice bran contain protein of high biological value, meaning good availability of amino acids for absorption. Combined with nutritious soybean meal they provide essential amino acids such as lysine which is vital for building muscle, and methionine for healthy skin and coat health and for hoof integrity.

CARBOHYDRATE

100% Australian wholegrain rice is gluten free and one of the best sources of digestible starch of all cereal grains, providing optimum energy for growth, work and maintenance. Rice based feeds are safer to feed with less risk of digestive upsets, for rice is almost entirely digested in the small intestine, rather than fermented in the hindgut.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is full of goodness including natural antioxidants gamma oryzanol and tocopherols, and omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina, and is great for building topline and muscle definition.

YEAST CULTURE

Yeast culture aids fibre digestion and helps enhance the absorption of nutrients in particular the minerals calcium and phosphorus. It assists in re-building the hindgut's beneficial microflora, aiding a range of digestive issues from poor appetite to intestinal tract damage, and in extreme cases enterocolitis.

ZEOLITE

A natural occurring mineral-rich clay-like compound which aids digestion and nutrient absorption. Naturally rich in silicon it helps with bone formation, calcification and bone strength, and cartilage development. It also has a high cation exchange capacity, great for capturing and removing toxins from the body.

MACRO-MINERALS

Calcium and phosphorus are essential for skeletal development, the maintenance of bones and teeth, aiding enzyme regulation and for energy production. Electrolytes including salt, potassium and magnesium, have an important role in balancing body fluids, aiding muscle contraction and maintaining nervous system health.

MICRO-NUTRIENTS

Micro-nutrients are part of most chemical reactions, helping to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Fat soluble vitamins A, D3 and E can benefit calcium absorption, wound healing and cell repair. Water soluble B vitamins are vital for metabolism and energy production.

MYCOTOXIN BINDER

Pasture, grasses and hay often contain moulds and fungi which produce mycotoxins that can cause respiratory, gastrointestinal, neurological issues. Binders capture these toxins in the digestive tract before they are absorbed into the blood stream, removing them through excretion.

DAILY FEEDING GUIDE

SUGGESTED FEEDING RATE (kg/DAY)

	BODY WEIGHT kg			
	300	400	500	600
Early Pregnancy (Up to 9 months)	0.5-1.0	1.0-1.5	1.5-2.0	2.0-2.5
Late Pregnancy (9 months to foaling)	1.0-1.5	1.5-2.0	2.0-2.5	2.5-3.0
Lactation	2.0-3.0	3.0-4.0	4.0-5.0	5.0-6.0
Young Weanling (3 to 6 months)	1.0-1.25	1.25-1.5	1.5-1.75	1.75-2.0
Weanling (6 to 12 months)	1.25-1.5	1.5-1.75	1.75-2.0	2.0-2.25
Yearling	1.25-1.5	1.5-1.75	1.75-2.0	2.0-2.25
2 Year Olds	1.5-2.0	1.75-2.25	2.0-2.5	2.25-2.75
Breeding Stallion	1.0-1.5	1.5-2.0	2.0-2.5	2.5-3.0

- Feed a minimum of 1% of your horse's body weight daily with high quality roughage such as hay, pasture and/or chaff.
- Total daily feed intake should be 2-3% of body weight, depending on age, workload and climate.
- If feeding over 0.5% body weight per day of pellets, divide into two smaller feeds.
- Ensure horses always have access to clean, cool and fresh water.

Suggested feeding rates to be used as a guide only. The amount of feed required will depend on the quality of the pasture/forage, the stage of growth, pregnancy, lactation, exercise intensity, body weight and condition of the weanling, yearling, broodmare.

ALL-ROUNDER PELLETS

LEISURE & RECREATION

TRAIL RECREATIONAL SHOW CAMPDRAFTING PONY

A nutritionally complete all-round feed, formulated for horses and ponies in light to moderate work of all disciplines. Low in starch and low GI it provides calm sustained power. Rich in rice bran oil makes it an extremely cool energy 'low fizz' feed. Fortified with vitamins, minerals and fatty acids makes it great for health, strength and vitality.

INGREDIENTS SELECTED FROM:

Rice Bran, wholegrain rice, bran, barley, calcium carbonate, magnesium oxide, salt, vitamin and trace mineral premix.

May contain traces of oats, maize and soy, for this feed is made in the same mill as feeds containing these ingredients.

NUTRITION THAT STACKS UP

NUTRITION THAT STACKS UP

Nutritional shares of pellets are approximates only

PROTEIN

Rice and rice bran contain protein of high biological value, meaning good availability of amino acids for absorption. These include lysine which helps to improve protein efficiency for growth, muscle mass and topline, and methionine for hoof integrity, and helping maintain healthy skin and coat. Amino acids are the building blocks of protein and are an essential part of virtually all of a horse's soft tissue. Insufficient quantities can result in weight loss and poor condition.

CARBOHYDRATE

100% Australian wholegrain rice is gluten free and one of the best sources of digestible starch of all cereal grains, providing optimum energy for growth, work and maintenance. Rice based feeds have less risk of digestive upsets, for rice is almost entirely digested in the small intestine rather than fermented in the hindgut where lactic acid is produced. Using rice starch assists in reducing the amount of lactic acid produced, resulting in better performance.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is energy dense and full of goodness including natural antioxidants gamma oryzanol and tocopherols, and omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina. Rice bran oil can help maintain appetite and is great for building topline and muscle definition.

MACRO-MINERALS

Balanced ratios of macro-minerals, in particular calcium and phosphorus are critical for horse health. Calcium and phosphorus are essential for skeletal development, the maintenance of bones and teeth, aiding enzyme regulation and for energy production. Electrolytes including salt, potassium and magnesium, have an important role in balancing body fluids, aiding muscle contractions and maintaining nervous system health.

MICRO-NUTRIENTS

Micro-nutrients are part of most chemical reactions, helping to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Vitamin E is present in cells in the body, supporting immunity, cardiovascular, circulatory and neuromuscular functions. Vitamins A and D₃ and E can benefit calcium absorption, wound healing and cell health. Water soluble B vitamins are vital for metabolism and energy production.

ANTIOXIDANTS

Rice Bran oil is naturally rich in antioxidants gamma oryzanol and tocopherols, which help protect cells against oxidative damage, strengthen the immune system and may improve reproductive function. The combination of organic selenium and vitamin E results in a more effective protection of cell membranes against damage caused by stress, pain or intensive exercise, which improves the horse's endurance capacity and performance.

DAILY FEEDING GUIDE

SUGGESTED FEEDING RATE (kg/DAY)

BODY WEIGHT (kg)	Maintenance	Light Exercise	Moderate Exercise
300	0.5 - 1.0kg	1.0 - 1.5kg	1.5 - 2.0kg
400	1.0 - 1.5kg	1.5 - 2.0kg	2.0 - 2.5kg
500	1.5 - 2.0kg	2.0 - 2.5kg	2.5 - 3.0kg
600	2.0 - 2.5kg	2.5 - 3.0kg	3.0 - 3.5kg

- Feed a minimum of 1% of your horse's body weight daily with high quality roughage such as hay, pasture and/or chaff.
- Total daily feed intake should be 2-3% of body weight, depending on age, workload and climate.
- If feeding over 0.5% body weight per day of pellets, divide into two smaller feeds.
- Ensure horses always have access to clean, cool and fresh water.

Suggested feeding rates to be used as a guide only. The amount of feed required will depend on the quality of the pasture/forage, exercise intensity, dentition, metabolism and condition of the horse.

NUTRITION THAT STACKS UP

NUTRITION THAT STACKS UP

Nutritional shares of pellets are approximates only

PROTEIN

Rice and rice bran contain protein of high biological value, meaning good availability of amino acids for absorption. Combined with nutritious soybean meal they provide essential amino acids such as lysine which is vital for building muscle, and methionine for healthy skin and coat health and for hoof integrity.

CARBOHYDRATE

100% Australian wholegrain rice is gluten free and one of the best sources of digestible starch of all cereal grains, providing optimum energy for growth, work and maintenance. Rice based feeds are safer to feed with less risk of digestive upsets, for rice is almost entirely digested in the small intestine, rather than fermented in the hindgut.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is full of goodness including natural antioxidants gamma oryzanol and tocopherols, and omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina, and is great for building topline and muscle definition.

FIBRE

Fibre is the most important component of a horse's diet aside from water. It is digested by bacteria in the hindgut to provide energy. It keeps horses feeling full and absorbs water to maintain hydration and improve endurance. Insufficient fibre can lead to behavioural problems such as acidosis, gastric ulcers and colic.

MACRO-MINERALS

Calcium and phosphorus are essential for skeletal development, the maintenance of bones and teeth, aiding enzyme regulation and for energy production. Electrolytes including salt, potassium and magnesium, have an important role in balancing body fluids, aiding muscle contraction and maintaining nervous system health.

MICRO-NUTRIENTS

Micro-nutrients are part of most chemical reactions, helping to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Fat soluble vitamins A, D₃ and E can benefit calcium absorption, wound healing and cell repair. Water soluble B vitamins are vital for metabolism and energy production.

VITAMIN E

Vitamin E is present in cells in the body, helping to strengthen immunity, cardiovascular, circulatory and neuromuscular functions. Natural Vitamin E is a superior form, as it is more stable, has higher retention, and has a much greater bio-availability than the synthetic version.

ORGANIC SELENIUM

The organic form of selenium is incorporated into muscles more effectively and provides better nutrition over inorganic sources. Functioning as a critical component in antioxidant activities, selenium works with vitamin E to provide an effective defence system for cells against oxidative damage.

DAILY FEEDING GUIDE

SUGGESTED FEEDING RATE (kg/DAY)

BODY WEIGHT (kg)	Maintenance	Light Exercise	Moderate Exercise
300	0.5-1.0kg	1.0-1.5kg	1.5-2.5kg

- ✓ SOURCE OF ESSENTIAL AMINO ACIDS
- ✓ NATURALLY RICH IN ANTIOXIDANTS

A super-high fat and exceptionally cool 'low fizz' energy feed for supplementing equine and livestock diets. Rich in protein and essential amino acids, it is ideal for building topline, muscle development and conditioning in horses. High in rice bran oil - a great source of antioxidants and essential fatty acids, it assists muscle recovery and advances skin and coat health.

INGREDIENTS SELECTED FROM:

Rice Bran.

May contain traces of oats, maize, wheat and soy, for this feed is made in the same mill as feeds containing these ingredients.

AMINO ACIDS

Lysine
Methionine

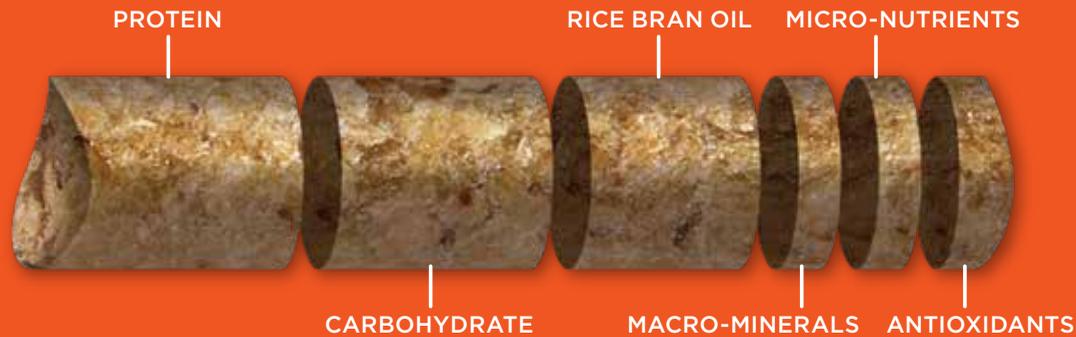

NOTE: If using supplementary selenium do not use at the same time as any other selenised fertiliser, prill or product, and do not exceed the stated dose and frequency without consulting a veterinarian.

Rice bran pellets are naturally lower in calcium and higher in phosphorus. Supplementary calcium may be required to balance the calcium to phosphorus ratio i.e. add 100g ground limestone (calcium carbonate) per 1kg of rice bran pellets.

NUTRITION THAT STACKS UP

NUTRITION THAT STACKS UP

Nutritional shares of pellets are approximates only

PROTEIN

Rice bran contains protein of high biological value, meaning good availability of amino acids for absorption. These include lysine which helps to improve protein efficiency for growth, muscle mass and topline, and methionine for hoof integrity, and helping maintain healthy skin and coat. Amino acids are the building blocks of protein and are an essential part of virtually all of a horse's soft tissue. Insufficient quantities can result in weight loss and poor condition.

CARBOHYDRATE

100% Australian wholegrain rice is gluten free and one of the best sources of digestible starch of all cereal grains, providing optimum energy for growth, work and maintenance. Rice based feeds have less risk of digestive upsets, for rice is almost entirely digested in the small intestine rather than fermented in the hindgut where lactic acid is produced. Using rice starch assists in reducing the amount of lactic acid produced, resulting in better performance.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is energy dense and full of goodness including natural antioxidants gamma oryzanol and tocopherols, and omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina. Rice bran oil can help maintain appetite and is great for building topline and muscle definition.

FIBRE

Fibre is the most important component of a horse's diet aside from water. It is digested by bacteria in the hindgut producing energy, as well as providing 'gut fill' for the large gastrointestinal tract, which keeps the horse healthy and feeling full. It also absorbs water helping to maintain hydration and improve endurance. Fibre is absolutely essential to well-being, with insufficient fibre contributing to behavioural problems such as acidosis, gastric ulcers and colic.

MICRO-NUTRIENTS

Micro-nutrients are part of most chemical reactions, helping to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Vitamin E is present in cells in the body, supporting immunity, cardiovascular, circulatory and neuromuscular functions. Vitamins A and D₃ and E can benefit calcium absorption, wound healing and cell health. Water soluble B vitamins are vital for metabolism and energy production.

ANTIOXIDANTS

Rice Bran oil is naturally rich in antioxidants gamma oryzanol and tocopherols, which help protect cells against oxidative damage, strengthen the immune system and may improve reproductive function. The combination of organic selenium and vitamin E results in a more effective protection of cell membranes against damage caused by stress, pain or intensive exercise, which improves the horse's endurance capacity and performance.

DAILY FEEDING GUIDE

RECOMMENDED MAXIMUM PERCENTAGE INCLUSION IN THE DIET

	Max. 15%	Max. 20 %	Max. 25%	Max. 30%
Horses & Ponies				
Dairy Cattle				
Beef Cattle				
Lambs & Sheep				
Pigs - Breeding				
Pigs - Weaning				
Pigs - Growing & Finishing				
Poultry - Laying Chicks				
Poultry - Laying Hens				

- Feed a minimum of 1% of your horse's body weight daily with high quality roughage such as hay, pasture and/or chaff.
- Rice bran can be fed at a rate of up to 30% of the daily ration e.g. approximately 3kg rice bran for a 500kg horse based feed consumption of 2% body weight.
- Rice bran pellets are not a complete feed. This feed is designed to be fed in conjunction with other ration ingredients.
- Ensure animals always have access to clean, cool and fresh water.

Suggested feeding rates to be used as a guide only. The amount of feed required will depend on the quality of the pasture/forage, other feeds, metabolism and condition of the horse.

THE WILSON SISTERS
Vicki, Kelly and Amanda Wilson
www.wilsonsisisters.nz

For our horses to perform their best they need to be conditioned like champions. From our wild horses to our World Cup show jumpers, our horses success over the past 12 years is testament to the quality nutrition in CopRice feed.

Vicki, Kelly and Amanda Wilson are prominent figures on the equestrian scene, having competed with success at the highest levels of show jumping for many years. Since 2012, the sisters have also become widely known for their work with wild horses with the top-rating TV show 'Keeping up with the Kaimanawas', two documentaries, and seven best-selling novels about their work taming the New Zealand Kaimanawas, American Mustangs and Australian Brumbies. More recently Vicki has become internationally recognised for her horse training after winning 'Road to the Horse', the World Championships of Colt Starting in 2017. Vicki's 'Sore Horse' clinics are also in high demand around the world, as she strives to share her in depth knowledge about rehabilitating and identifying behavioural and soundness issues in horses.

BENEFITS OF EXTRUDED FEED FOR EQUINE NUTRITION

SUPERIOR STARCH DIGESTIBILITY

The heat and pressure involved in the extrusion process causes the starch granules in the feed to gelatinise. Gelatinisation enables more complete digestion and absorption of starch in the small intestine. This reduces the risk of undigested starch fermenting in the hindgut and significantly lowers the potential for digestive upsets such as laminitis, whilst supporting a healthier hindgut environment for the digestion of forage and production of B-group vitamins.

IMPROVED PROTEIN DIGESTIBILITY

The extrusion process allows the enzymes that breakdown protein (proteases) to work more efficiently and therefore extract more protein from the feed for use by the horse.

CopRice Performer

CopRice Versatile

CopRice Veteran

CopRice High Joule

IMPROVED NUTRIENT AVAILABILITY

The improved digestion of ingredients results in a greater availability of vitamins, minerals, amino and fatty acids in the diet. These additional nutrients are particularly valuable to young growing horses and performance horses, where maximum nourishment is required, and for older horses which can often have reduced digestive efficiency meaning less nutrition is extracted from feed than is desirable for maintaining optimum health and wellbeing.

IMPROVED SALIVA PRODUCTION

Extruded feeds tend to have a lower bulk density than regular pellets, which results in more chewing and greater saliva production when eating. Saliva contains bicarbonate which buffers the digestive system and helps reduce the risk of digestive upsets such as ulcers.

IMPROVED DENTAL CARE

The aerated profile of extruded feeds, tends to make them softer than traditional pellets. This softer texture helps with teeth maintenance by slowing down the rate of wear and tear.

SUPERIOR PALATABILITY

Extrusion processing gives the feed a sweet, nutty aroma that is highly attractive to horses.

SUPERIOR FOOD SAFETY

Extruded feeds are cooked at high temperature which kills bacteria thereby minimising the risk of digestive upsets.

DAVID CAMERON
Professional Show Jumper
www.facebook.com/TallaraAndDaveEquestrian

I have been feeding my horses CopRice for over 8 years. The reason I feed CopRice is simple, the health and wellbeing of my horse is a priority and goes hand in hand with their performance. When feeding CopRice I know my horses are getting all their nutritional requirements, and because I have experienced the benefits of feeding rice based feeds firsthand I will not switch to any other brand.

EXTRUDED FEED

ADVANCED NUTRITION

- ✓ EXTRUDED FOR SUPERIOR DIGESTION
- ✓ RICH IN STABILISED RICE BRAN & OIL
- ✓ SOURCE OF COOL 'NO FIZZ' ENERGY
- ✓ VITAMINS & MINERALS FOR VITALITY

A unique low starch, nutrient-enriched all-round feed, to support the health and vitality of leisure, recreational and spelling horses in light to moderate work. Based on stabilised rice bran and rice it provides a range of essential fatty acids and amino acids including lysine and methionine. Rice bran is also a good source of biotin which is essential for maintaining hooves, and is rich in rice bran oil for a healthy shiny coat.

INGREDIENTS SELECTED FROM:

Stabilised rice bran, wholegrain rice, calcium carbonate, molasses, salt, vitamin and mineral premix (including organic selenium), lysine.

May contain traces of oats, maize, wheat and soy, for this feed is made in the same mill as other feed containing these ingredients.

NUTRITION THAT STACKS UP

PROTEIN

Rice and rice bran contain protein of high biological value, meaning good availability of amino acids for absorption. Rice bran provides essential amino acids such as lysine which is vital for building muscle, and methionine which helps support hoof integrity.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is full of goodness including natural antioxidants gamma oryzanol and tocopherols, and omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina, and is great for building topline and muscle definition.

MACRO-MINERALS

Calcium and phosphorus are essential for skeletal development, the maintenance of bones and teeth, and for enzyme regulation and energy production. Electrolytes including salt, potassium and magnesium, have an important role in balancing body fluids, aiding muscle contraction and maintaining nervous system health.

ANTIOXIDANTS

Rice bran oil is naturally rich in antioxidants gamma oryzanol and tocopherols, which help protect cells against oxidative damage. Antioxidants help strengthen the immune system, assist with the recovery of muscular problems such as 'tying up' and may improve reproductive function.

CARBOHYDRATE

Rice is gluten free and one of the best sources of digestible starches of all cereal grains. Rice based feeds are safer to feed with less risk of digestive upsets, for rice is almost entirely digested in the small intestine, rather than fermented in the hindgut.

FIBRE

Fibre is the most important component of a horse's diet aside from water. It is digested by bacteria in the hindgut to provide energy. It keeps horses feeling full and absorbs water to maintain hydration and improve endurance. Insufficient fibre can contribute to behavioural problems e.g. acidosis, gastric ulcers and colic.

MICRO-NUTRIENTS

Micro-nutrients help to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Fat soluble vitamins A, D₃ and E are more easily absorbed and stored when the diet contains oil. Water soluble B vitamins are vital for metabolism and energy production.

ORGANIC SELENIUM

The organic form of selenium is incorporated into muscles more effectively and provides better nutrition over inorganic sources. Functioning as a critical component in antioxidant activities, selenium works with vitamin E to provide an effective defence system for cells against oxidative damage.

EXTRUDED FEED

EXTRA HIGH ENERGY

- ✓ EXTRUDED FOR SUPERIOR DIGESTION
- ✓ RICH IN STABILISED RICE BRAN & OIL
- ✓ HIGH FAT FOR SUSTAINED COOL ENERGY
- ✓ SOURCE OF ESSENTIAL AMINO ACIDS

A nutrient dense feed formulated to provide sustained energy for horses in moderate to heavy exercise including endurance, eventing, show jumping, dressage and racing. It contains a high level of rice bran oil which increases the energy density of the diet and helps delay muscle fatigue. It is also rich in antioxidants including gamma oryzanol and tocopherols, which assist with post-exercise muscle recovery and repair.

INGREDIENTS SELECTED FROM:

Stabilised rice bran, wholegrain rice, soybean meal, calcium carbonate, magnesium oxide, mono-calcium phosphate, molasses, salt, canola oil, vitamin and mineral premix (including natural vitamin E, organic selenium and organic zinc), potassium chloride, lysine, added natural vitamin E.

May contain traces of oats, maize and wheat, for this feed is made in the same mill as feeds containing these ingredients.

EXTRUDED FEED OPTIMAL HEALTH

- ✓ EXTRUDED FOR SUPERIOR DIGESTION
- ✓ RICH IN STABILISED RICE BRAN & OIL
- ✓ REDUCES TO SOFT MASH WITH WATER
- ✓ ANTIOXIDANTS TO AID IMMUNITY

A high protein and high fat feed for sustaining muscle mass, topline and healthy weight of aged, retired and working horses over 15 years old. Tailored nutrients and amino and fatty acids, help maintain strong bones, teeth, joints and hooves. Organic selenium in combination with antioxidants including natural vitamin E and vitamin C, assist in improving immunity and wellbeing.

INGREDIENTS SELECTED FROM:

Stabilised rice bran, wholegrain rice, soybean meal, linseed, calcium carbonate, potassium chloride, molasses, salt, canola oil, vitamin and mineral premix (including organic selenium), added vitamin C, yeast culture.

May contain traces of oats, maize, wheat and soy as this feed is made in the same mill as other feed containing these ingredients.

NUTRITION THAT STACKS UP

NUTRITION THAT STACKS UP

PROTEIN

Rice and rice bran contain protein of high biological value, meaning good availability of amino acids for absorption, and nutritious soybean meal – one of the best sources of vegetable protein. Together they provide essential amino acids, vital for building muscle, topline and tissue growth and repair.

RICE BRAN OIL

Sourced exclusively from Australia, CopRice rice bran oil is full of goodness including natural antioxidants gamma oryzanol and tocopherols, and Omega 3, 6 and 9 fatty acids. It is a beneficial energy source that conserves glycogen stores during exercise to delay fatigue and improve stamina, and is great for building topline and muscle definition.

YEAST CULTURE

Yeast culture aids fibre digestion and helps enhance the absorption of nutrients in particular the minerals calcium and phosphorus. It assists in re-building the hindgut's beneficial microflora, aiding a range of digestive issues from poor appetite to intestinal tract damage, and in extreme cases enterocolitis.

MICRO-NUTRIENTS

Micro-nutrients help to activate and mobilise vitamins, minerals, amino and fatty acids, transporting them around the body. Fat soluble vitamins A, D₃ and E can benefit calcium absorption and wound healing. Water soluble B vitamins are vital for metabolism and energy production.

CARBOHYDRATE

Rice is gluten free and one of the best sources of digestible starch of all cereal grains, providing an energy source for maintenance, exercise or building condition. Rice based feeds are safer to feed with less risk of digestive upsets, for rice is almost entirely digested in the small intestine, rather than fermented in the hindgut.

LINSEED

Linseed also known as flaxseed, is rich in omega 3 fatty acids. It is also a source of high quality protein, vitamins and minerals. Linseed oil can help improve body condition, joint and ligament health, and may assist in reducing skin allergies and inflammatory conditions such as arthritis.

MACRO-MINERALS

Calcium and phosphorus are essential for skeletal development, the maintenance of bones and teeth, and for enzyme regulation and energy production. Electrolytes including salt, potassium and magnesium, have an important role in balancing body fluids, aiding muscle contraction and maintaining nervous system health.

ANTIOXIDANTS

Rice bran oil is naturally rich in antioxidants gamma oryzanol and tocopherols, that help protect cells against oxidative damage. They also strengthen the immune system, may improve reproduction function and may assist with the recovery of muscular problems such as 'tying-up'.

DAILY FEEDING GUIDE

FOR CONDITIONING/PERFORMANCE SUGGESTED FEEDING RATE (kg/DAY)

BODY WEIGHT (kg)	DAILY RECOMMENDED	DAILY MAXIMUM
300	0.3-0.6kg	1.8kg
400	0.4-0.8g	2.4kg
500	0.5-1.0kg	3.0kg
600	0.6-1.2kg	3.6kg

- Feed a minimum of 1% of your horse's body weight daily with high quality roughage such as hay, pasture and/or chaff.
- High Joule feed can be fed at a rate of up to 30% of the daily ration e.g. approximately 3kg High Joule feed for a 500kg horse, based on a feed consumption of 2% bodyweight.
- High Joule feed is not a complete feed, it is designed to be fed in conjunction with other ration ingredients.
- Ensure horses always have access to clean, cool and fresh water.

Suggested feeding rates to be used as a guide only. The amount of feed required will depend on the quality of the pasture/forage, exercise intensity, dentition, metabolism and condition of the horse.

VICKI WILSON
Professional Show Jumper
www.wilsonsisters.nz

For over a decade I have used CopRice feeds. People are always commenting on how healthy my horses look and how well they perform. It's the quality feed produced by CopRice like their new stabilised rice bran product 'High Joule' which supports optimum conditioning. I love the results I am getting.

NUTRITION THAT STACKS UP

RICE HULLS

IDEAL FOR STABLE BEDDING

COVERAGE

For best results, fill stable to a depth of approx. 15cm. For deep beds a depth of approx. 25cm is recommended.

2048
CopRice Rice Hull Bale 125kg

Barcode: 9310 1400 0064 0

GREAT INSULATION

Rice hulls offer improved thermal insulation properties by allowing your horse to heat the air layers that exist within the hulls. The combination of the hulls and the heated air layers insulate your horse from cold floors. Rice hulls have the added benefit of being virtually fire proof. The non-combustible and non-smoldering nature of rice hulls make them a very safe alternative in Australian conditions.

AVOID DAMPNESS

Rice hulls will protect your horse from dampness because of its unique silica properties. Urine quickly dissipates from the rice hulls and damp, wet, smelly areas are virtually eliminated. The rice hulls will remain dry providing comfortable and healthy bedding. Any side effects from bacteria and mould caused by damp bedding is eliminated, makes rice hulls perfect for young horses or horses with compromised immune systems, such as sick horses or horses recovering from injury.

COMFORT

Rice hulls will mould to the shape of the horse providing a cushioning effect against any hard surfaces. This results in less foot and leg troubles and improved joint performance. The occurrence and severity of hock sores and other pressure sores is normally improved in horses bedded on rice hulls, making it the perfect bedding for performance horses, show horses and yearling preparation.

INEDIBLE

Rice hulls are not an attractive food source, and will not normally be eaten by the horse. Unlike alternative products, such as straw, which are often eaten by the horse or pony instead of being utilised as bedding. This makes rice hulls a great alternative for horses and ponies at risk of founder, laminitis or colic.

INSECT RESISTANT

Rice hulls remain insect free, improving your horse's comfort and health. Rice hulls are non-allergenic, making them perfect for horses with sensitive skin or prone to skin irritations.

ENVIRONMENTALLY FRIENDLY

Rice hulls are a renewable resource that is processed without any chemical additives. No trees were destroyed in the production of this product.

ALL NATURAL AND BIODEGRADABLE

Rice hulls are an all natural product that can be used as a soil conditioner upon disposal. They are ideal for composting and improving soil structure and do not need to be 'aged' before adding to garden beds.

ECONOMICAL

Rice hulls require less frequent replacement to other alternatives due to it's silica properties, making them a very affordable product. Once a stable has been filled, the amount of rice hulls required to 'top up' is normally minimal. Mucking out stables using rice hulls usually takes less time and produces less wasted bedding as the clean hulls slip through the rake back into the stable.
