POULTRY HEALTH

Many families keep backyard free range chooks for the joys of having hens wandering around the backyard and the reward of having fresh, home raised eggs. Here are some simple tips for keeping your home flock healthy;

- ✓ Ensure birds always have access to cool and clean water and at all times.
- ✓ Feed consumption varies depending on the housing conditions, rate of egg production, egg size and hen weight. The approximate consumption is 100g to 140g per hen per day.
- ✓ Make sure housing is clean and dry to reduce hygiene problems such as external and internal parasites.

CopRice Chick Starter Crumble is formulated to contain all the nutrients required for good growth of young chicks. The excellent nutritive value of rice bran, along with quality grain and vegetable protein sources provides a complete and balanced feed. Rice bran is also naturally high in omega 6 (essential fatty acid) which helps support good growth and healthy chicks. CopRice Chick Starter Crumble has the added benefit of a coccidiostat, which helps prevent the incidence of caecal and intestinal coccidiosis in young birds. Caecal and intestinal coccidiosis can be detrimental to the health and growth of young chicks and pullets, and in extreme cases can result in death.

CopRice Pullet Grower Crumble is formulated to contain all the nutrients required for growing healthy pullets. The excellent nutritive value of rice bran, along with quality grain and protein sources provides a complete and balanced feed. Rice bran is also naturally high in omega 6 (essential fatty acid) which helps support good growth and healthy pullets. CopRice Chick Starter Crumble has the added benefit of a coccidiostat, which helps prevent the incidence of caecal and intestinal coccidiosis in young birds.
